1 OUR HIGHLIGHTS

DATA STATISTICS ANALYSIS

Most data

No other fleet management system collects and delivers as much data as Mobile Easykey. You can prepare them with the help of the Mobile Easykey Manager or export them to other programs via CSV or REST-API.

Working Mode · Forklift Name
UVV Due Date · Logged out
Logged out · Active Crash 1/2/3
Loaded · De-energizedPassive Crash 1/2/3
Powered Unloaded
Presence · Module Name
Total Costs · Energized
Event · Usage Mode
Switch-on Hours

The best Data

It can't be said often enough: we are independent of manufacturers. Our data is unembellished.

The most important data

We only deliver what you really need.

---

2 OUR HIGHLIGHTS
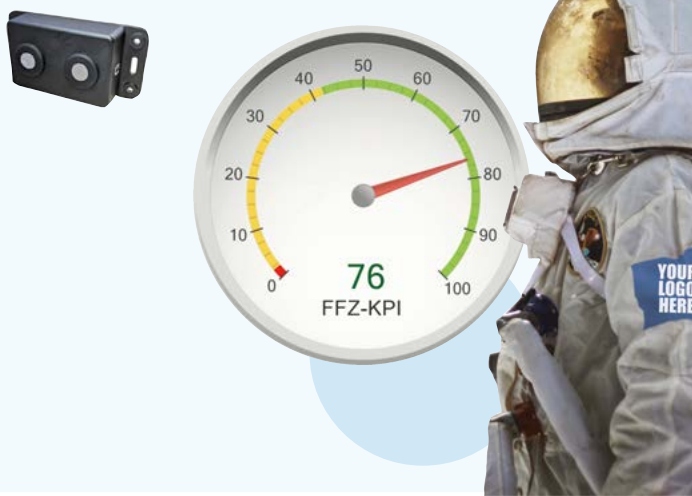

EFFICIENCY KEY FIGURE

FFZ KPI

FFZ-KPI: One glance is all it takes

You start the Mobile Easykey software and you can immediately see how efficiently each individual industrial truck is used. This idea even earned us an IFOY nomination in 2023!

Fleet management is no rocket science!

The FFZ-KPI is completed by the data from the load sensor. How often do your vehicles drive unloaded? Find out!

3 OUR HIGHLIGHTS

MANUFACTURER INDEPENDENT COMPETENCE

Freedom

Yellow, orange, green, red... so many colours, so many manufacturers. We can equip them all. And you can choose the best one for you from all manufacturers. Stay flexible and receive independent, „unembellished" data and analyses from us.

Advocate for our customer

For more than 25 years, we have been working independently of manufacturers – always in the interest of our customers. And in close cooperation with our customers. This is one of the reasons why we are the market leader in Europe.

Europe's №1 manufacturer independent

---

4 OUR HIGHLIGHTS

SOFTWARE OPERATING RIGHTS

6-fold data protection

Mobile Easykey's software has been independently tested for GDPR compliance. And it passed with flying colours. We ensure that your personal data is securely stored. Only with you! You can assign individual rights for each software user. Or you can simply adopt the GDPR-compliant default settings.

Even the works council loves us

In case of doubt, the works council may be the only person who sees real names instead of pseudonyms. And Mobile Easykey is not used to monitor performance!

---

5 OUR HIGHLIGHTS

BATTERY MANAGEMENT

So small, so clever

Is the electrolyte level of the battery too low? Who knows? You will receive a warning immediately, e.g., by e-mail to the workshop.

Battery damage hurts

The forklift detects unauthorised batteries and logs this in the software's logbook. Optionally, an e-mail is sent.

---

6 OUR HIGHLIGHTS

COMPACT HARDWARE

Switch lock out, smart lock in

Say „Bye Bye Key" and end the key mess. Secure your devices against unauthorised use.

Always fits

Space for Mobile Easykey is in the smallest cottage. With smart lock 1, you can stop unauthorised use of drawbar devices, for example. smart lock 3 can use almost the full range, incl. use of your company badges for RFID access.

And for large-scale solutions and for special applications, we have the modules modular, explosion protection and a cold storage variant.

---

7 OUR HIGHLIGHTS

DOCUMENTS MANAGEMENT

Everything in one place

You can manage all, really all documents relating to vehicles and users in the Mobile Easykey software: UVV test reports, maintenance reports, instructions, training, G25 inspections, etc. You can even manage devices that are not equipped with Mobile Easykey hardware (e.g., roller shutters).

Alarm, Alarm!

Not only do we offer you the complete management of these processes, but also a timely reminder for upcoming audits, trainings, etc. – whenever and to whomever you want.

---

8 OUR HIGHLIGHTS

CRASH SENSOR

Unique Crash Sensor

So inconspicuous, so effective: With a three-axis accelerometer and a body sound microphone, it adapts to all conditions.

It doesn't get any safer than this

In the event of a crash, the software sends an e-mail e.g., to the fleet manager. At the same time, the industrial truck is put into crawl speed or immobilised, for example. A check or re-commissioning is carried out by an authorised person using the master- or workshop transponder.

---

9 OUR HIGHLIGHTS

LOCATING

Where is it?

No matter how big an industrial truck may be. The larger the company, the more likely you are to look for it.

Indoors or outdoors

The indoor locator works with Wi-Fi or Bluetooth – with access point accuracy. The Outdoor Locator locates via GPS. And with the route analysis, you can identify potential accident hotspots.

---

10 OUR HIGHLIGHTS

INTERFACE

VDI interface ready

Plug & Play

Admittedly, it's not quite that simple. But close. The term „industrial truck" is a wide range: We can fit almost any device. To make things easier and faster, there are the Mobile Easykey- and VDI interfaces.

Ex works

With many manufacturers, you can order the interface directly with the new industrial truck. And the VDI interface initiated by Mobile Easykey is to become the industry standard – we are working hard on it!

Manufacturer-independent Fleet Management – Market Leader in Europe!

Take advantage of our leasing and rental offers: Reduce capital commitment, increase flexibility!

Mobile Easykey – that's us
> 25 years of experience | Made in Germany | Close cooperation with the customers
